BACKGROUND

Rab are low-molecular-weight GTP-binding proteins. There are over 40 rab proteins in mammals that form the largest branch of the Ras superfamily of GTPases. Located on the cytoplasmic face of organelles and vesicles, rab proteins are involved in intracellular vesicle docking and membrane fusion. Rab 11 is associated with both constitutive and regulated secretory pathways.

SPECIFICITY

This antibody specifically reacts with Rab 11 of human, mouse and rat origin.

The antibody can be used in Western blotting, immunoprecipitation and immunohistochemistry.

IMMUNOGEN

A synthetic peptide derived from N-terminus of human Rab 11 protein.

STORAGE

This antibody is stable for 12 months when stored at 2-8°C.
